Graphical documents (PDFs, bitmaps, videos of 1D, 2D, and 3D graphs, and custom graphics) are of professional printable quality. Smile handles the most usual data file formats, and extensions for other file formats can be plugged-in. Smile The technologies included in Smile: AppleScript Terminal windows, an AppleScript editor with many helpers, an editor of scripted interfaces, a web browser, a proprietary URL protocol to make HTML interfaces and have them send events to scripts, a text editor for ASCII and Unicode, with a search-and-replace tool supporting Regular Expressions, a XML editor, a Regular Expression engine, a XML and p-list engine, a 2D graphic engine, to program vectorial PDF graphics by script, fast mathematical commands on numbers, arrays and matrices, commands for driving industrial interfaces: RS232 serial communication, digital I/O, LED display. Benefits Basically, the Smile system will appeal to those concerned with not doing the same thing twice. This feature is a concern for scientists or engineers running long computations or computations involving large amounts of data, when stopping, dumping, then relaunching a program implies significant costs. Smile is primarily designed for scientists, engineers, desktop publishers, and web applications developers, to help them produce faster and better work, automate frequent tasks, and control complex operations. More recently, web-based control of facilities becomes a standard, and Smile is now also a web applications server - and a web browser. a smile software for editing SmileLab Smile provides an Aqua interface to make any data graph "manually", and libraries of commands to make graphs and process data by script (SmileLab can display at any moment the script corresponding to the user's action.) Performances The mathematical commands are optimized, and versatile thanks to AppleScript. It features a number of production technologies and a natural fashion of having them work together. SMI's core implements the key features of the software, and publishes them to AppleScript. History The name of the first version of Smile, released in 1995, was SMILE (upper case), and some users still name it so. Asynchronous as well as synchronous behaviors are implemented, allowing Smile Server to be used as an alternate solution to .asp or .php to build dynamic sites, including AJAX-based web sites. SMI is designed to make development costs lower while maintaining a wide range of applications. Please help improve this article by adding citations to reliable sources. The need for 2D and 3D real-time visualization (of the measurements) gave rise to SmileLab. SMI is really a core engine, written in C/C++, which alone does nothing: it requires an interface, and that interface's behavior is programmed in AppleScript, in scripts. SMI is the name of the software that Satimage, a French company engaged in machine vision technology, develops and uses to power the systems that they supply, automated real-time measurement and inspection systems for industrial plants. Smile also handles XML-RPC requests. A specific cgi, included, makes an http request into a p-list (Apple's associative array XML format) and sends it to Smile Server on that port (specified in a configuration file). And on the first day of middle school, Natalie discovers that things are worse than she thought -- athletic enough, stylish enough, or talented enough. If Natalie can focus on who she is rather than who she isn't , then she might realize she's more than enough, just the way she is. Also, the Smile system benefits from a unique feature of AppleScript: live interaction with running codes. For instance, once a plot is finely tuned with custom settings, the user can view and save the (AppleScript) script to get exactly the same settings later.
